Active Light | Connecting with Nature

Creating Light Creates Inspiration

01:00 02:00 03:00 04:00 05:00 06:00 07:00 08:00 09:00 10:00 11:00 12:00

Wellbeing in office spaces is enhanced by holistic lighting ecosystems. Active Light is linked to daylight dynamics, actively supporting the natural bio rhythm and seamlessly ensuring maximum visual comfort for tasks. Such human centric lighting solutions bring people together and promote creativity, as they are effortlessly personalized, with the individual always at heart.

See here how Active Light works:
zumtobel.com/activelight

Intensity

The right lighting level can best be determined by the individual's visual ability and the task itself. Moreover, basic planning parameters and current standards for workplaces must be taken into account.

Direction

Light is a tool for architectural design. By varying luminance and light distribution the general atmosphere of a space can shift instantly, which can have a major impact on communication, creativity and easing of tension.

Colour

The human body reacts to the colour temperature of light. While cooler, blueish light colours activate, warmer, reddish light colours have a soothing effect. A study carried out in cooperation with the Fraunhofer IAO shows that a user's colour preferences vary depending on age, working hours and individual needs.

Time

By mimicking the natural dynamics of daylight, artificial lighting complements and supports one's internal clock.

A sky for the office

It is a well-known fact in architecture: The bigger the cubic content, the more difficult it is to guide daylight into the inner areas. MELLOW LIGHT plays with light. It brings the depth of the room to life in the mellow colours of the sky until late at night. Walls and ceilings begin to breathe and give people a renewed sense of outdoor freedom.

1988
MELLOW LIGHT

*“1988 – the birth of the MELLOW LIGHT series.
The initial design was a square recessed luminaire
with two concave metal reflectors painted white.
The light source, a compact fluorescent lamp, was
covered by a perforated plate.
The white luminaire on a white ceiling created a
whole new aesthetic and quickly became a popular
design tool for many architects.”*

*Harald Schwarzer
Product Manager of the first
generation of MELLOW LIGHT*

2016

MELLOW LIGHT evolution/infinity

Recessed luminaire

“When asked to redefine MELLOW LIGHT, an icon in the world of office lighting, we were not only tasked with writing the next chapter in a long history of archetypal Zumtobel design, but also changing the way we engage with workplace lighting. Taking design cues from the previous five generations of MELLOW LIGHT luminaires, we referenced this iconic vernacular to shape the future of workplace lighting.”

Daniel Stromborg

Practice Area Leader, Gensler

MELLOW LIGHT evolution / infinity

Surface-mounted luminaire

The background of the entire page is a photograph of a sunset or sunrise. The sun is a bright, glowing orb positioned slightly to the right of the center, just above the horizon. Its light creates a shimmering, golden path across the surface of the water. The sky is a uniform, warm orange color. In the distance, the silhouettes of hills or mountains are visible against the horizon line. The overall mood is peaceful and contemplative.

Daylight and an interplay of colours

The closer artificial light comes to resemble daylight, the more invigorating the effect that it has on people. Science has often tried to explain this phenomenon, but we can already feel the effect in the mellow glow of MELLOW LIGHT, with the kind of dynamic lighting characteristics that we normally associate with daylight. This is the ideal solution for computer work and in spaces where reflections have to be eliminated and moods need to be created – even using the changing colours of the sky on request. The minimalist look helps the luminaire integrate seamlessly into the overall interior architecture. It extends the architectural language of design with a clear, separate word. MELLOW LIGHT.

MELLOW LIGHT evolution / infinity

Greater design freedom through controllable light channels

MELLOW LIGHT **evolution**

Brightness spreads gently and uniformly through the space – as natural as daylight. The well-balanced illumination of the work surface, wall and ceiling creates an open, bright atmosphere in the room and helps prevent glare and irritating shadows. The perfectly dispersed LED points remain invisible.

MELLOW LIGHT **infinity**

The lighting can be adjusted flexibly to suit different needs and situations thanks to separately controllable light channels. The two lighting wings create a pleasant background brightness to give the room an inviting atmosphere. Switching on the direct light component in the middle supplies the work surface with perfectly targeted light.

Activity-based lighting

This advanced form of light optimisation adjusts the lighting in line with the particular activity that is being carried out in the space. Activity-based lighting represents the further evolution of proven mood-lighting concepts, putting the focus even more firmly on the individual. Static, automated or even dynamic lighting scenes are carefully blended to optimise the lighting environment and increase the feeling of wellbeing. Intelligent sensor technology can provide the necessary support for efficient performance. The ATIVO contrast sensor detects how the space is being used and automatically selects the appropriate lighting scene.

Lighting effect

Gentle homogeneity or outstanding glare suppression

Crystal optic

This re-interpretation of the classic lens optic guarantees glare-free illumination with up to 4800 lumens. This makes it ideal for areas that require more than 500 lux or where there are greater distances between the luminaires. The contrast with the diffuse lighting wings also creates some impressive lighting effects.

Lighting wings

The mild diffuse light from the wings softly brightens up the room – as light as a feather. The result is a pleasant atmosphere with no shadows.

Lenticular optic

Prism louvres create a gentle and homogeneous appearance while offering excellent glare suppression with up to 3500 lumens. The UGR < 19 classification, this complies with the applicable standards for DSE workstations.

*MELLOW LIGHT evolution/infinity
in a variety of colours*

Architecture gains greater freedom of design with more colours. While the white luminaire can be discreetly integrated into drywall ceilings, the silver version creates a flexible transition between the fitting and the exposed concrete. If highlights are required, choose from additional versions in brown, black and naturally anodised aluminium. The optional colours can be easily viewed and ordered from the online product catalogue in the myMELLOW LIGHT section.

Just like in natural surroundings

Bright rooms with fewer shadows are typical for MELLOW LIGHT. Just like daylight, the luminaire supports the human biorhythm with dynamic colours of 3000 K to 6000 K.

Control the light separately or together

The brilliant direct light component and the gentle lighting wings can be used separately or together. In combination with the ATIVO sensor, the light is switched automatically between workplace and ambient lighting.

Different optics

The lenticular optic offers glare suppression with up to 3500 lumens and a homogeneous appearance. Thanks to a shielded lumen package of up to 4800 lumens, the crystal optic is ideal for working areas that require more than 500 lux.

Wide choice of models

The product programme includes linear and square luminaires in a range of different designs. The recessed luminaire is available for M600 and M625 module sizes.

Global roll-out

MELLOW LIGHT evolution / infinity is set to travel the world after its launch in Europe. This helps guarantee: a uniform lighting concept for all users, no matter if they are in Dubai or China.

MELLOW LIGHT evolution / infinity

Recessed and surface-mounted luminaire

Overview

Recessed luminaires

[...] Shared properties Mellow Light evo/inf

- LED ceiling-recessed luminaire for general and task area lighting
 - Diffuse side sections for pleasant ambient lighting
 - Colour temperature 4000 K (intermediate) and 3000 K (warm white) and tunableWhite from 3000–6000 K
- Colour rendering Ra > 80 for office applications
 - Chromaticity tolerance between multiple luminaires of up to 3 MacAdam ellipses
 - EN12464-1 compliant for office applications with UGR < 19
 - LED service life: 50000 h before luminous flux is reduced to 85 % of the initial value
- Luminaire pre-wired using halogen-free leads
 - Please order the fixing kit separately for concealed ceiling systems and sawn-out holes

We provide unique customer benefits by integrating technology, design, emotion and energy efficiency. We combine the best possible ergonomic lighting quality for an individual's well-being with the responsible use of energy resources. The company's own sales organisations in twenty countries, as well as commercial agencies in fifty other countries, form an international network of experts and design partners providing professional lighting consulting, design assistance and comprehensive services.

Lighting and sustainability

In line with our corporate philosophy "We want to use light to create worlds of experience, make work easier and improve communications and safety while remaining fully aware of our responsibility to the environment", Zumtobel offers energy-efficient high-quality products, while at the same time making sure that our production processes based on the considerate use of resources are environmentally compatible.

zumtobel.com/sustainability

Top quality – with a five-year guarantee.

As a globally leading luminaire manufacturer, Zumtobel provides a five year manufacturer's guarantee on all Zumtobel branded products in accordance with the terms of guarantee at zumtobel.com/guarantee.
