#### Part of the IntelliFlex I/O System

**IntelliFlex I/O by Draper** is a complete control solution for motorized roller shades. Intelligent motors are connected to wall switches and other input devices through a wired network. This network allows communication between the devices and also distributes power to them from the motors, eliminating the need for external power supplies. Configuration is done from the devices themselves, with no need for a computer connection to the network. Networks can include up to 120 devices and extend to 4000 feet in total with no further restrictions on connections between components.
