VALUES

STENI AS supplies the façade industry's widest and most exciting range of surface solutions and format options. Our name is a guarantee of both cost-effective solutions and lasting aesthetics and quality.

We work closely with construction clients, architects and developers to ensure long-term relationships and to create added value.

We do all we can to be trusted advisers to our customers in supplying the façade solutions of tomorrow. We achieve this by combining experience with knowledge, innovation, playfulness and enthusiasm – and by offering useful tools and methods. Our partners can expect us to be good listeners who really understand their needs and requirements. Our customers can expect to receive quick and straightforward service, superb logistics and excellent availability via our distribution links.

We believe that lasting aesthetics, high quality and environmental friendliness are the key to a good future. We therefore provide sustainability by taking our social responsibility seriously and by giving our products a documented long lifespan. We work hard to minimise waste, to reduce CO₂ emissions and to ensure that our customers' life-cycle costs are kept low.

Our vision:

“Creating the ultimate building expressions for future generations”

Respect

Innovative

Quality

Customer-oriented

STENI STANDARD FASTENERS (ACID-RESISTANT A4)

Product	Dimensions	No. per pack
Wood screw*	4.0 × 28/33 mm	500 pcs
Metal screw (self-drilling)	4.2 × 25 mm	500 pcs
Metal screw (penetrating)	4.5 × 25 mm	500 pcs

* Stocked with untreated heads, and with painted heads in stock panel colours.
The screws are supplied with a pan head and a T20 Torx head (see page 13 for a complete overview).

STANDARD PRODUCTION FORMATS (mm)

Minimum 10 m² per division.

STENI Colour stocked formats:
1,195 × 2,995 mm.
Full production width of 1195 mm is always charged.

Standard panel divisions*	Standard production length
295 + 295 + 295 + 295	1195–3495
395 + 395 + 395	1195–3495
595 + 595	850–3495
795 + 395	1195–3495
895 + 295	1195–3495
1195**	850–3495

* All panels split from the same full-width panel must be of the same length.

** No minimum quantity for 1195 mm width.

For a complete overview of available formats, see the tables from page 16 onwards.

STENI Colour is easy to maintain and quick to install, with minimal waste. The panels are highly environmentally friendly, and thanks to their expected lifetime of over 60 years the total life-cycle cost is the lowest in their class.

STENI Colour is a fibreglass-reinforced stone composite panel suitable for use as cladding on all types of buildings. The panels should be installed in accordance with our installation instructions.

STENI Colour is available in a wide range of standard colours and formats, and in three gloss levels, so you will always be able to find a variant that is perfect for your project.

Find out more about why STENI is good for the environment.

Installation instructions: Scan the QR code or visit steni.com

Take a good look at our extensive range of surfaces.

STENI COLOUR – STANDARD COLOURS

Printed colours may deviate slightly from the actual colours. Please request a product sample.

* Not available in matt [M].

ABOUT COLOUR CODES

All standard surfaces have a unique STENI code beginning with SN or SV, e.g. SN 8010 [Colour], SN 100 [Nature] or SV 10002 [Vision]. In addition we give NCS or RAL colour codes for STENI Colour to make it easier for you to match the colour with other products.

COLOUR PRECISION

We check the colour of STENI Colour using a spectrophotometer, which measures colour differences in accordance with the measuring methods specified in CIE 15:2004.

The permitted variance within the same batch is $\Delta E = 0.5$
The permitted variance between different batches is $\Delta E = 6.0$

CAN'T FIND THE COLOUR YOU'RE LOOKING FOR?

We mix all of the colours for STENI Colour ourselves in the factory. This uniquely enables us to offer special colours within the NCS and RAL colour systems. We now have over 2,200 approved colours in our archive, so please contact us if you want a colour that is not in our standard range. Unused paint degrades over time, so all colours, whether standard or

special colours, are mixed to order. Even though our processes are high-precision, there may be small variations between mixes. You may wish to bear this in mind if your project is being planned with partial deliveries. Note that we are unable to offer exact colour matches between multiple production runs.

STENI VISION 40^y

A robust and smooth façade panel with a surface of print and electron-beam-cured acrylic for a unique and creative effect.

STENI STANDARD FASTENERS (ACID-RESISTANT A4)

Product	Dimensions	No. per pack
Wood screw*	4.0 × 28/33 mm	500 pcs
Metal screw (self-drilling)	4.2 × 25 mm	500 pcs
Metal screw (penetrating)	4.5 × 25 mm	500 pcs

* Stocked with untreated heads.
The screws are supplied with a pan head and a T20 Torx head (see page 13 for a complete overview).

STENI VISION ELEMENTS

All STENI Vision standard designs are also available in L- and U-elements. See page 18 for details.

STENI Vision is available in a range of standard designs and three gloss levels. You can also create your own design using our custom production. We will be happy to help you to find your own unique look.

STENI Vision is a non-stock item. Full production width of 1,195 mm is always charged.

Standard panel width	Standard production length
1195	850-3190

For a complete overview of available formats, see the tables from page 16 onwards.

SAMPLES

Wherever possible, please look at samples in the environment where the panels are to be used. The light source will have a major effect on the colour reproduction, and we therefore recommend looking at the sample in daylight

STENI Vision is a fibreglass-reinforced stone composite panel suitable for use as cladding on all types of buildings. The panels should be installed in accordance with our installation instructions.

Installation instructions:
Scan the QR code or visit
steni.com

The digital print technology that we use in the production of STENI Vision enables you as the customer to create a completely unique effect for your façade.

We work closely with skilled graphic designers who can help you to realise your idea. Our partners can help you with everything from the initial concept to finished, print-ready files. As is normal in the field of graphic design and printing, the printing technology is based on the CMYK colour system. This results in a smaller range

of colours than systems such as NCS or RAL, and as a result it may be difficult to reproduce certain colours with STENI Vision. Visit our website to find out more about how to plan and realise your Vision project. Our experts will help you to achieve a brilliant result!

STENI VISION GIVES YOU OPPORTUNITIES

INTEGRATION BLEND IN OR STAND OUT

Adapt your building to its surroundings, or give it a completely different look.

INFORMATION CLEAR MESSAGES

Clear information helps people to decide. Make it clear: who, what, where and why.

IDENTITY A PERSONAL TOUCH

Accentuate your building – give it a unique personality

ILLUSION AESTHETIC TRICKS

Things aren't always what they seem. Optical illusions provide a powerful way in which to highlight architectural expressions.

STENI Vision is easy to maintain and quick to install, with minimal waste. The panels are highly environmentally friendly, and thanks to their expected lifetime of over 60 years the total life-cycle cost is the lowest in their class.

WANT A PARTICULAR PATTERN?

We can print any image that meets our image quality requirements.

ONE WALL = ONE DESIGN

A single image can be divided up to cover all or part of the façade!

DIGITAL PRINTING

STENI Vision has a surface that is produced using digital printing technology. This gives you, as a designer, a unique opportunity to create an individual look in an easy, modern manner.

Be inspired!

Weight: approx. 15 kg/m²

C: Coarse
Grade: 5–8 mm
Weight: approx. 18 kg/m²

HIGH FIRE CLASS

STENI Nature Coarse has been awarded fire class A2-s1, d0.

CAN'T FIND WHAT YOU'RE LOOKING FOR?

STENI Nature can be ordered with special stone or in a special grade. In that case, our laboratory must approve the type of stone in advance and ensure that the grade chosen is suitable for production. This will result in a unique production run that will give your façade the unique and robust look that you want. Our standards of quality and precision are just as stringent for special orders as they are for our standard colours, but we cannot guarantee that the same type of stone will be available in the future. Please take this into consideration when calculating the size of your order.

BE INSPIRED

ORIGINAL ACCESSORIES

STENI can supply all the accessories you will need for a complete façade. Our products are fully tested, so you can be sure that all of the components will work together, the installation will go smoothly, and the desired result will be achieved.

Scan the QR code or visit
steni.com

FORMATS AND DRILLING

ABOUT THE FORMAT TABLES

The panels are produced as a continuous sheet that is initially cut into lengths of 850–3,495 mm. These full-width panels are then divided in accordance with the widths stated in the format tables. Therefore, each full-width panel can only be divided into smaller panels of the same length. There is no required minimum order size for split panels of the same length within each full-width panel. However, the total quantity of the split panels must add up to the area of the full-width panel concerned (see diagram).

If divisions that do not meet the minimum-quantity requirement are ordered, we will attempt to produce these as custom formats. If even this is not possible, the panels will be supplied full-width, and must be adapted on the construction site. Any such panels will be supplied along with a drawing showing how they should be cut with minimal waste.

Same panel division, but different panel lengths.
The total area must satisfy the minimum quantity.

Splitting full-width panel (here 4×295 mm): see the panel division column in the tables below for possible configurations. All panels split from the same full-width panel will always be of the same length. The minimum quantities in the tables refer to this division.

AN optimal production requires that the number of split panels always adds up to the full-width panel produced. Unfortunately, in some cases parts of the full-width panel cannot be used. There are three things in particular that will affect this.

- Choice of width format
- Variation in length format
- Splitting up of the order

STENI is committed to supplying sustainable solutions that make better use of our resources and reduce the strain on the environment. By discussing your project with us at an early stage, you as a customer can help us in this important work and also help to reduce your project costs.

		895 + 295	850-3190	

* Custom production formats cannot be pre-drilled.

STENI Vision is a non-stock item.
Full production width of 1195 mm is always charged.

Download our standard drilling templates.
Scan the QR code or visit steni.com

PRE-DRILLING PANELS

All standard production format panels can also be supplied pre-drilled. In addition, most custom production formats can be pre-drilled, except STENI Vision. Pre-drilling follows our standard drilling templates [see our website].

STENI COLOUR AND STENI VISION DESIGN ELEMENTS

STENI Vision design elements here refers only to standard print designs.

All items are delivered undrilled.

NB: All dimensions are internal dimensions.

L-ELEMENT

$\alpha 1$ [°]	A [mm]	B [mm]	Length [mm]	A+B max. [mm]
70-89	60-592	60-592	100-1500	1600
			1501-2000	1250
			2001-2400	1000
			2401-3000	800
			3001-3495*	700
90-150	60-1192	60-1192	100-1500	1600
			1501-2000	1250
			2001-2400	1000
			2401-3000	800
			3001-3495*	700

U-ELEMENT

$\alpha 1$ [°]	$\alpha 2$ [°]	A [mm]	D [mm]	C [mm]	Length [mm]	A+C+D max. [mm]
90-150	90-150	60-592	100-1187	60-592	100-1500	1600
					1501-2000	1250
					2001-2400	1000
					2401-3000	800
					3001-3495*	700

* The maximum length of STENI Vision elements is 3190 mm

Please remember that elements will be described as follows in order confirmations:

For L-elements: Wing A / Wing B / Length / Angle

For U-elements: Wing A / Base D / Wing C / Length / Angle 1 / Angle 2

TO AVOID ERRORS, PLEASE TRY TO FOLLOW THE SAME SEQUENCE WHEN ORDERING

STENI NATURE DESIGN ELEMENTS

STENI Nature design elements provide smooth, even corners.
 All items are delivered undrilled.
 NB: All dimensions are internal dimensions.

OPERATION AND MAINTENANCE

CLEANING

CHOOSING A CLEANING AGENT

All STENI panels can be cleaned with most cleaning agents on the market intended for use on buildings [e.g. "house wash" detergents]. Choose a cleaning product based on what you want to wash off. Carefully follow the cleaning product's instructions for use. If you are uncertain, we recommend performing a test in a discreet location, or contacting a professional cleaning company. STENI Nature and STENI Terra can be primed and impregnated to make the surface easier to keep clean.

HIGH-PRESSURE WASHING

All STENI panels can be cleaned with a high-pressure washer up to 100 bar and at temperatures up to 80 °C. Hold the nozzle at least 20–30 cm from the surface. High-pressure washing at high temperatures produces good results, is kind to the environment and is preferable to excessive use of chemicals. When using high-pressure washers on STENI Nature and STENI Terra, there is always a risk that the surface stone could loosen. Exercise caution.

AFTER INSTALLATION

Wipe away drilling and cutting dust with a damp microfibre cloth containing an alkaline cleaning agent. All labels etc. should be removed immediately after installation. Remove any residual adhesive with a suitable cleaning agent.

CUTTING/DRILLING DUST

Always use tools with dust extraction systems when cutting and drilling STENI panels. Dust that is not captured can be easily removed with compressed air and a damp microfibre cloth containing an alkaline cleaning agent.

PAINT, GRAFFITI, VARNISH, STAIN, ETC.

For proper removal of paint, graffiti, etc. it is important to determine what type of paint products have been used and choose cleaning agents accordingly. Improper use or unsuitable products may cause the paint to penetrate deeper into the panel.

Always contact a professional cleaning company before attempting to remove paint products [see steni.com for a video showing how to remove graffiti].

OIL, GREASE, SOOT, ETC.

Use aromatic degreasing agents or a similar product designed for use on painted surfaces [cars etc.]. Follow the instructions carefully.

Rinse the façade with a high-pressure washer, preferably using hot water. Use plenty of water.

ALGAE, MOSS, DIRT, ETC.

Use a suitable alkaline or pH-neutral cleaning agent. Follow the instructions for use carefully.

Rinse clean with a high-pressure washer. Use plenty of water.

DISINFECTION

STENI Colour and STENI Vision are suitable for use as surfaces that require regular disinfection [such as in the food industry, in operating rooms, etc.].

ACIDIC CLEANING AGENTS

STENI Nature and STENI Terra contain limestone, which can become discoloured if you use acidic cleaning agents.

MAINTENANCE

Pollution, temperature fluctuations, weather and wind can cause wear and tear on the façade. An annual visual inspection is recommended for STENI façade panels and façade systems to ensure optimum lifespan and a stable façade with a beautiful, exclusive appearance year after year.

The warranty provisions require that regular and necessary maintenance of the façade is performed.

You should check the following points annually to ensure you perform necessary maintenance:

- Check to see whether the façade needs washing. The joints and areas around penetrations etc. are particularly likely to need cleaning.
- Make sure the panels are intact and that there are no cracks or damage as a result of impacts from vehicles, vandalism, etc.
- Make sure the panels are properly attached and that the screws are not loosening.
- Ensure that the façade is adequately ventilated and that the underlying structure is not suffering from moisture damage.

LIFTING AIDS

We recommend using lifting equipment to ensure that you can handle the panels easily and safely on site. Such equipment can be obtained at rental outlets for construction equipment.

Examples of lifting equipment.

Vacuum spreader

Glass vacuum lifter

Lifting hook

HEALTH AND SAFETY IS IMPORTANT

Frequent and heavy lifting is a strain on the body.

Follow the recommendations of the local labour inspection authority.

ADVICE FOR PURCHASERS

BUY STENI

STENI only sells through building material dealers. If you are a private individual, you should therefore contact your local supplier of building materials. If you are working on major projects requiring more follow-up, please contact one of our sales teams directly or scan the QR code below.

STOCK ITEMS

If you order one of our stock items, your order will normally be delivered within two weeks.

WHAT YOU GET

All our products are delivered on pallets, securely packed with protective plastic and straps. Each pallet is labelled with product and order numbers. Each pallet has a packing list providing information about its contents and brief instructions about storage and handling on site, as well as the necessary acceptance inspection.

There will also be information about where you can download installation instructions in your language.

Please remember that you will need to have a forklift truck available to unload the delivery at the construction site. If you do not have a forklift truck, a lorry crane will have to be ordered.

WHAT TO CONSIDER

Firstly, as a customer you must decide which products you want and what you want the façade to look like. The formats, colours and composition you choose have a great bearing on the result in terms of both appearance and total cost. If you cannot use our standard formats, we recommend that you contact your local sales representative, who will be able to help you so that together we can find the best solution for your project.

During this process, we will also consider the choice of colour and gloss level, how on-site logistics will be handled, and various other aspects that you as a customer will have to decide on when you purchase custom formats from us. A phone call to us at an early stage can save you a lot of work, time and cost later in the process.

You should order via your local supplier of construction products or through one of our sales team. STENI will be happy to help you to set up your order and thereby ensure that we understand your needs.

STENI AROUND THE WORLD

Developing and manufacturing high-quality façades in Vestfold in Norway since 1965.

Our products have been developed in the most demanding climate, and every day all over the world our façade panels are tested against the wind and weather, sun and rain and temperature fluctuations.

We have developed our products based on decades of experience and feedback, and today we can offer façade panels with a number of unique product advantages and a 40-year functional warranty.

Steni panels are both eco-friendly and pollution-resistant. Robust yet lightweight. Fireproof and frost-resistant. They keep their colour, and moisture just runs off. We call this Steni quality.

Today, we have sales companies and distributors throughout Europe, North America and the Middle East, and Steni façade panels protect and adorn buildings all over the world.
