

New Sliding System

For Doors, Windows & Openings

Interior and Exterior

Sliding system that fit your **DESIGN**

Combining function and aesthetics is one of the most important concerns of Bruag, after many years of experience in the building industry working closely with architects and craftsmen through projects all over the world, Bruag offers a range of unique indoor and outdoor sliding products to fit with your own design or one of our more than 100 proposed design ideas. Whether it is door, windows or other types of openings, several sliding solutions are proposed to you. Bruag remains at your disposal to help you realize your ideas.

“The only standard is that there is no standard”

Fixation options

Exterior sliding shutters

Slided Non-visible

1

Outdoor

Cellon 8, 10mm

The compact high-pressure laminate board based on cellulose and phenol resin is just perfect for exterior shutters, this material passes every endurance and weather test. And nearly every perforation you can imagine is possible.

- Light weight : Plain panel of Cellon 10mm is 14kg/m², and only about 9kg/m² with a perforation like in this project.

For exterior shutters we usually work with the system HAWA-Frontslide (usually 60, automated or manual), Ideal in building façades designed for privacy and shade, and where space is at a premium, e.g. hotels, public buildings, office premises.

- The sliding shutters can be moved into any position.
- Easy installation on wall or ceiling.

2

Indoor

MDF 30mm

The MDF 30mm is the best material when it comes to interior sliding doors and space dividers, with enough thickness to highlight the chosen design.

For interior sliding doors we usually work with the system HAWA-Junior.

- Two-way suspension.
- Light and silent action.
- Adjustable vertically and laterally.
- Track stop, adjustable retaining.

3

Formats

For both interior and exterior application, you have the free choice of size and color (RAL, NCS).

- Cellon is available up to 3,60m x 1,80m.
- MDF 30mm even 5,50m x 2,00m.

DESIGN

you imagine, we realize !

You can either select one of our designs or create your own perforation pattern. We use DXF/DWG drawings as the basis for our work.

Important for you to know that customised designs are usually not more expensive than choosing perforations of this list. Your design is just being categorized into 1 - 5 according to the complexity for laser cutting.

Our Collection of perforations and ornamentalations is available in PDF on our website : www.bruag.ch

We have recommended to use the Hawa system, for the fixation, but you can also use other sliding systems available in the market as well.
